Independent verification of this EPD and data, according to ISO 14025:2010:

Internal  External

HSL Group has specialized in partition wall systems and we are this industry's leading companies in Finland. Our success is born out of a complete service, that starts from the building property's designing phase and continues from the property's putting in service to the transformation of the spaces throughout the whole lifecycle of the property. Which means that we work in cooperation with architects, developers, construction companies, as well as the property owner and the users of the premises.

# PRODUCT INFORMATION

## PRODUCTS INCLUDED

- Wood framed glass walls
  - With oak, pine or birch frame
  - Glass thickness of 6.38 mm, 8.76 mm, 10.76 mm, 12.76 mm or 34 mm
- Full glass walls with wood profile
  - With oak, pine or birch profile
  - Glass thickness of 6.38 mm, 8.76 mm, 10.76 mm, 12.76 mm or 34 mm
- Aluminium framed glass walls
  - Glass thickness of 10.76 mm
- Full glass walls with aluminium profile
  - Glass thickness of 6.38 mm, 8.76 mm, 10.76 mm, 12.76 mm or 34 mm
- Solid elements
  - With particleboard or MDF

## PRODUCT DESCRIPTION AND APPLICATION

### Wood framed glass walls and full glass walls with wood profile

Wood framed glass wall is module structured and has two benefits: The wall is easy to install and move in case it's needed. The modules width and height can be measured according to the client's wish. The profile can be painted or, for example, coated with a veneer.

*Wood framed glass walls and full glass walls with wood profile*

*Aluminium framed glass walls*

### Aluminium framed glass walls

Aluminum framed partition wall is designed and made from 34x38mm aluminum profile with elements in the shape and size of the client's specification. The dividing will also be done as needed. The elements are really easy to install and effortless to move with the change of the space needs. Sliding doors are usually installed on the aluminum walls, but also turning-, and hinge doors are possible. The aluminum profiles are available anodized to natural color or powder painted in accordance with the RAL color chart.

*Full glass walls with aluminium profile*

### Full glass walls with aluminium profile

Full glass wall is a beautiful solution for many kinds of properties. Abundant glass surfaces bring spaciousness and lightness to the space. The aluminum profile surrounds the glass only from the top, down and if needed from the side. Profiles are not needed in the middle of the glasses. The type of tempered safety glass will be used according to the need as the glass on the HSL full glass walls. The visible corners of the glasses will be sanded and the seams between the glasses will either be left open or filled with silicone if needed.

### Solid element walls

HSL solid element partition wall is module structured, which has two benefits: the wall is easy to install and in case it's needed, to move quickly and dust-free. The element's trunk is made of laminated veneer lumber, and it has mineral wool insulation inside. Building board is on both sides of the structure. The elements don't require any kind of molding.

*Solid elements with particleboard*

*Solid elements with MDF*

## TECHNICAL INFORMATION

Additional technical information can be found at <https://hslgroup.fi/>.

## RAW MATERIALS

Raw material category	Wood framed glass walls and full glass walls with wood profile	Aluminium framed glass walls	Full glass walls with aluminium profile	Solid elements with particleboard	Solid elements with MDF

### Biogenic carbon content

### kg C per declared unit

Biogenic carbon content in product	1.64 kg (wood framed glass walls and full glass walls with wood profile) 0 kg (aluminium framed glass walls) 0 kg (full glass walls with aluminium profile) 8.61 kg (solid elements with particleboard) 8.72 kg (solid elements with MDF)
Biogenic carbon content in packaging	1.02 kg (glass walls) 0.55 (solid elements)

**Note. 1 kg biogenic carbon is equivalent to 44/12 kg of biogenic CO<sub>2</sub>.**

## SUBSTANCES, REACH - VERY HIGH CONCERN

The product does not contain any REACH SVHC substances in amounts greater than 0.1 % (1000 ppm).

## TITLE PAGE IMAGE

The title page image includes aluminum framed glass walls and solid elements with MDF.

# PRODUCT LIFE-CYCLE AND LIFE-CYCLE ASSESSMENT

Period for data	2022
Declared unit	1 m2

The results are calculated according to the most sold variation and declared per 1 m2.

Wood framed glass walls and full glass walls with wood profile are declared as one average product. The products are within  $\pm 3\%$  of the average.

The products can be produced in various sizes and with ranging glass thickness. The glass and wood/aluminium parts of wood framed glass walls, full glass walls with wood profile and full glass walls with aluminium profile are declared separately. This allows to obtain the results for other sizes and glass thicknesses.

Raw material category	Wood framed glass walls and full glass walls with wood profile	Aluminium framed glass walls	Full glass walls with aluminium profile	Solid elements with particleboard	Solid elements with MDF
	Amount, %	Amount, %	Amount, %	Amount, %	Amount, %
Reference size for DU	0.9 m x 2.09 m for wood framed glass walls 2.7 m x 2.09 m for full glass walls	0.9 m x 2.09 m	2.7 m x 2.09 m	0.6 m x 3.0 m	0.6 m x 3.0 m
Glass thickness	12.76 mm	10.76 mm	12.76 mm	N/A	N/A
Mass per DU*	31.50 kg + 3.90 kg	30.74 kg	31.50 kg + 1.37 kg	20.19 kg	21.32 kg

The study does not exclude any modules or processes which are stated mandatory in the EN 15804:2012+A2:2019 and the applied PCR. The study does not exclude any hazardous materials or substances.

The study includes all major raw material and energy consumption. All inputs and outputs of the unit processes, for which data is available for, are included in the calculation. There is no neglected unit process more than 1% of total mass or energy flows. The module specific total neglected input and output flows also do not exceed 5% of energy usage or mass.

The data sources for the study are EPDs, Ecoinvent 3.8 (2021) and One Click LCA databases. The tools used for the study were One Click LCA and Open LCA.

## SYSTEM BOUNDARY

The scope of the EPD is cradle to gate with options (A1-A4), modules C1-C4 and module D.

Product stage			Assembly stage		Use stage							End of life stage				Beyond the system boundaries		
A1	A2	A3	A4	A5	B1	B2	B3	B4	B5	B6	B7	C1	C2	C3	C4	D	D	D
x	x	x	x	MND	MND	MND	MND	MND	MND	MND	MND	x	x	x	x	x	x	x
Raw materials	Transport	Manufacturing	Transport	Assembly	Use	Maintenance	Repair	Replacement	Refurbishment	Operational energy use	Operational water use	Deconstruction/demolition	Transport	Waste processing	Disposal	Reuse	Recovery	Recycling

Modules not declared = MND. Modules not relevant = MNR.

## MANUFACTURING AND PACKAGING (A1-A3)

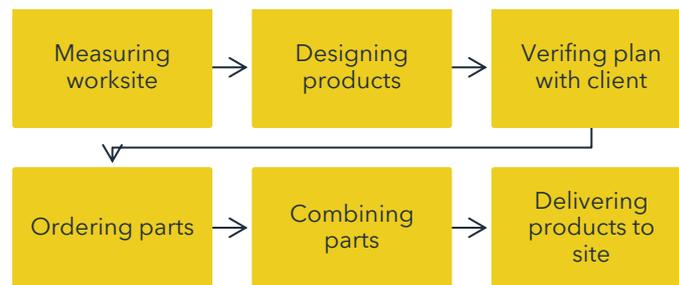

The environmental impacts considered for the product stage cover the manufacturing of raw materials used in the production as well as packaging materials and other ancillary materials.

Vehicle capacity utilization volume factor is assumed to be 1, which means full load. In reality, it may vary but as role of transportation emission in total results is small and so the variety in load is assumed to be negligible. Empty returns are not taken into account as it is assumed that return trip is used by transportation company to serve the needs of other clients.

Fuels used by machines, and handling of waste formed in the production processes at the manufacturing facilities are included in this stage. All fuel and energy use was allocated based on production volume. The electricity used in the plant is Finnish grid energy. The study also considers the material losses occurring during the manufacturing processes as well as losses during electricity transmission. Co-product allocation has not been used.

The Products are packaged using plastic and placed on wooden pallets. The mass of the packaging is 2.7 kg per declared unit for glass walls and 1.5 kg per declared unit for solid elements.

Figure 1. Manufacturing process

<b>Electricity data source and quality</b>	Market for electricity, medium voltage (Reference product: electricity, medium voltage). Source: Ecoinvent 3.8, Finland. Unit: kWh
<b>Electricity CO<sub>2e</sub> / kWh</b>	0.26

## TRANSPORT AND INSTALLATION (A4-A5)

Transportation impacts occurred from final products delivery to construction site (A4) cover fuel direct exhaust emissions, environmental impacts of fuel production, as well as related infrastructure emissions.

The transportation distance is defined according to RTS PCR from the place of manufacture to Helsinki, Finland. According to the manufacturer, transportation doesn't cause losses as products are packaged properly. The final product is transported 140 km by lorry. Vehicle capacity utilization volume factor is assumed to be 1.

<b>Vehicle type used for transport and distance</b>	140 km by lorry
<b>Specific emission</b>	0.17
<b>Capacity utilisation (including empty returns)</b>	100%
<b>Volume capacity utilisation factor</b>	1

A5 has not been declared.

## PRODUCT USE AND MAINTENANCE (B1-B7)

This EPD does not cover the use phase.

Air, soil, and water impacts during the use phase have not been studied.

## PRODUCT END OF LIFE (C1-C4, D)

It is assumed that 100% of products are collected at demolition site.

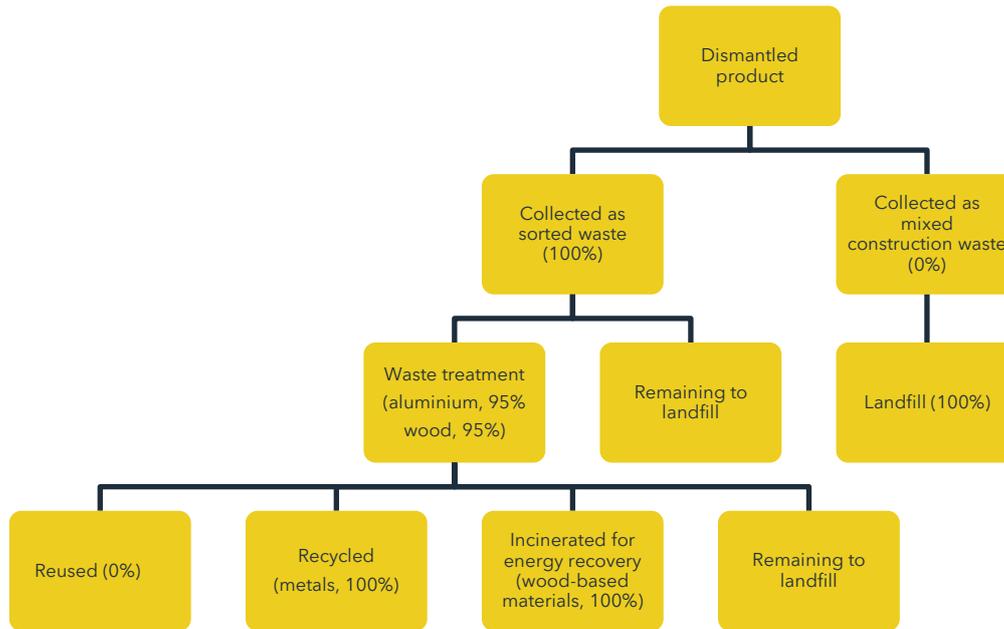

It is assumed that the dismantled product is transported 100 km by lorry (either to recycling facilities or landfill).

It is assumed that 95% of the aluminium in the product is recycled and 95% of the wood material is incinerated for energy recovery.

All biogenic carbon stored in the products is assumed to be released in C3 and C4.

All waste that is not recycled or incinerated gets landfilled.

Figure 2. EOL scenarios

Scenario parameter		Wood framed glass walls and full glass walls with wood profile	Aluminium framed glass walls	Full glass walls with aluminium profile	Solid elements with particleboard	Solid elements with MDF
Collection	Collected separately	35.40	30.74	32.86	20.19	21.32
	Collected with mixed	0.00	0.00	0.00	0.00	0.00
Recovery	Re-use	0.00	0.00	0.00	0.00	0.00
	Recycling	0.00	3.44	1.09	0.00	0.00
	Energy recovery	3.50	0.00	0.00	17.82	18.89
Disposal	Final deposition	31.89	27.30	31.77	2.37	2.42
Scenario assumptions e.g. transportation		Average distance to recycling facility was assumed as 100 km by lorry				

Any material that left the product system in C3 has been considered in module D. Only net benefits are considered. The aluminum was considered to be virgin material in A1. The recycling efficiency is assumed as 90%. The recycled aluminum can be used to produce new aluminium products. The heat and electricity produced as benefit in C3 is considered. The efficiency rate for incineration is 73% (7% us used to produce electricity and 66% to produce heat). Waste packaging from A5 has not been considered. Module D scenario is representative of Europe.

## RESULTS AND CONVERSION FACTORS

The results are declared per 1 m<sup>2</sup>. The results for other sizes can be obtained by multiplying the results by the desired area.

The following table indicates the calculation principle along with GWP-fossil and GWP-biogenic results for all products.

Product	Calculation principle	GWP-fossil (kg CO <sub>2</sub> e)	GWP-biogenic (kg CO <sub>2</sub> e)
Wood framed glass walls and full glass walls with wood profile (glass thickness 12.76 mm)	Glass walls: glass parts + Glass walls: wood parts	39.07	-5.70
Aluminium framed glass walls (glass thickness 10.76 mm)	Aluminium framed glass walls	89.55	0.38
Full glass walls with aluminium profile (glass thickness 12.76 mm)	Glass walls: glass parts + Glass walls: aluminium parts	56.4	0.4
Solid elements with particleboard	Solid elements with particleboard	14.0	-31.5
Solid elements with MDF	Solid elements with MDF	22.1	-31.9

The results for wood framed glass walls, full glass walls with wood profile and full glass walls with aluminium profile can be obtained by adding the results of the glass parts and the results of the wood/aluminium parts. The results for the glass parts shall be multiplied by the appropriate factor for the desired thickness. The mass of the wood/aluminium parts is the same regardless of the thickness of the glass and shall not be multiplied by the factors.

Glass thickness	Conversion factor
6.38 mm	0.50
8.76 mm	0.69
10.76 mm	0.84
12.76 mm	1.00
34 mm	2.66

The following table shows GWP-fossil results for all glass thicknesses.

Product	GWP-fossil (kg Co <sub>2</sub> e) per 1 m <sup>2</sup>	GWP-fossil (kg Co <sub>2</sub> e) per 1 m <sup>2</sup>	GWP-fossil (kg Co <sub>2</sub> e) per 1 m <sup>2</sup>	GWP-fossil (kg Co <sub>2</sub> e) per 1 m <sup>2</sup>	GWP-fossil (kg Co <sub>2</sub> e) per 1 m <sup>2</sup>
	Glass thickness 6.38 mm	Glass thickness 8.76 mm	Glass thickness 10.76 mm	Glass thickness 12.76 mm	Glass thickness 34 mm
Wood framed glass walls and full glass walls with wood profile	20.2	27.2	33.2	39.1	101.9
Full glass walls with aluminium profile	37.5	44.6	50.5	56.4	119.2
