HALLS

80*100 meter | PVC HALL

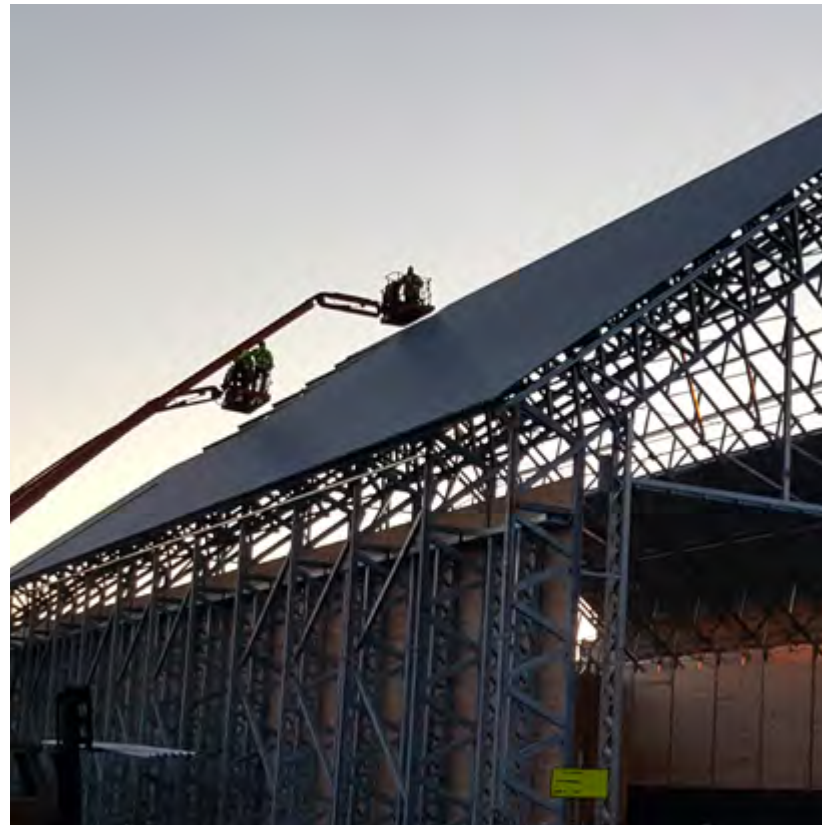

No job is too big! Hallgruppen supplies structures designed for each projects specified need. Here is a picture form the assembly of a tent structure with an amazing size of 80 x 120 meters.

25*70 meter | BULK-STORAGE

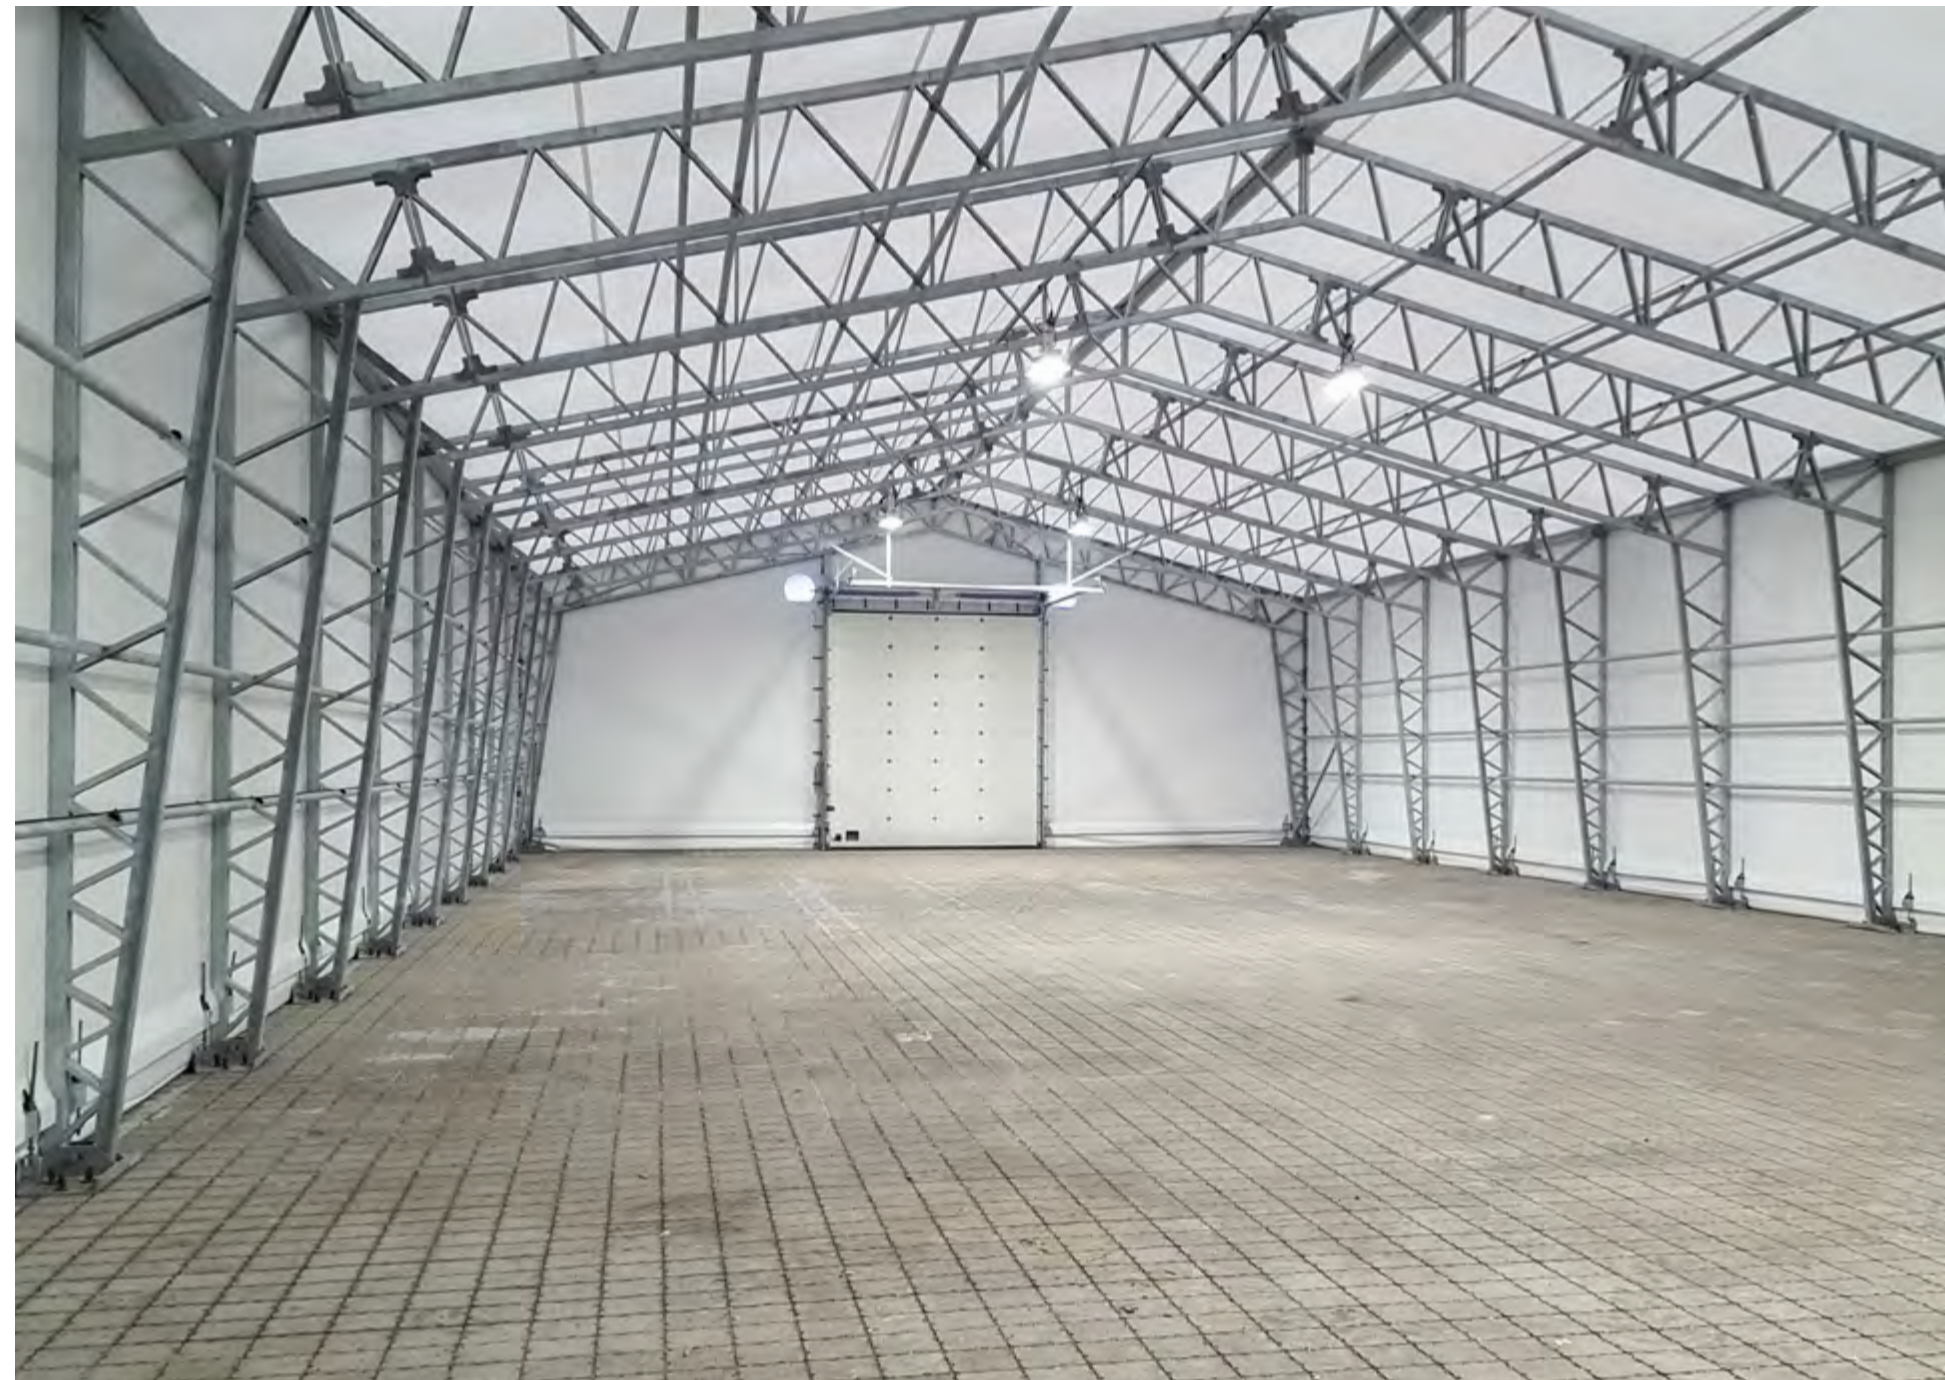

A bespoke hall for storage of Anthracite coal. The hall is 25 x 40 meters with an ridge height over 17 meters. The hall is designed to contain almost 10.000 ton of bulk material. Roofs and walls is covered with steel cladding.

25*70 meter | BULK-STORAGE

An internal cover make a hall brighter, cleaner and also has an insulating effect. Hallgruppen's tension system for PVC covers gives the hall a smooth, tight and appealing look for many years to come.

45 x 57 meters.
External wall height of 11 meters.

BULK-STORAGE

Hallgruppen has long experience in dimensioning and supplying internal walls for bulk storage.

A bulk wall system makes it possible to maximize the storage possibility. Hallgruppen's internal wall system is a cost-effective solution. Each system is dimensioned and quality controlled for Your storage needs.

20x30 meter
Insulated hall

BULK-STORAGE

Hallgruppen supplies a wide variety of insulated halls customized for the project specifications.

PVC HALL

PVC HALL

Hallgruppen supplies all types of gates and doors through our subcontractors. We have extensive experience with different gate solutions. Together with our customer we find the best solution for the project.

The options range from simple sliding gates and doors to complex hangar gates and access systems.

25x35 meter | PVC HALL

Hallgruppen take your need for flexible solutions serious and we always work towards the best design and solution for your project.

PVC HALL

30x40 meter
Insulated hall

PVC HALL

40*75 meter

PVC HALL

25*42 meter | PVC HALL

15*36 meter | PVC HALL

In general a Hallgruppen hall comes as a hot dip galvanized lattice structure. The galvanizing provides a tremendous resistance to weathering. The structure has usually a free span from wall to wall and ceiling space is utilized to the fullest by avoiding use of wires/purlins across the hall.

A Hallgruppen hall is designed according to the current euro codes, and anchored either with ground spikes, anchor bolts, weights or a combination of these. Anchoring always follow the requirements of applicable euro codes and executed accordingly.

To print the company's logo or other graphics is an excellent way to promote your business. Graphics can be placed on all sections of the cover, and there are no other limitations in size than available surface.

40*40 meter | BULK-STORAGE

Bulk storage can also be solved like above! Open gables for access on both ends and walls of concrete or wood to keep bulk materials inside the hall.

This solution is very common when it comes to storage seasand for the concrete business! Hallgruppen can provide you with a turnkey solution.

40*40 meter | HYBRID HALL

The hybrid hall is our newest solution to create both storage and a store under the same roof. It's an ordinary hall but we have created a warm and protected salesarea for sensitive goods or customers. The protected area is build up by sandwichpanels which are integrated into the structure. Hybridhall works for all types of business and is a perfect and low investment for companies who want's a quick and low cost entry to a new market.

CONSTRUCTION

CONSTRUCTION

CONSTRUCTION

Hallgruppen supplies a wide range of agricultural buildings which are designed to match the existing buildings on your farm.

This barn is designed with a second floor strong enough to store cars and machines. It is a combination of insulated and uninsulated sections.

CONSTRUCTION

Hallgruppen delivered a fire-station to Bodø Airport. It was a “turn-key” contract including all subcontractors and inventory for a project exceeding 2200 m².

CONSTRUCTION

Halls for agriculture and storage. Hallgruppen is an experienced supplier in steel-clad halls. The options are endless and Hallgruppen has them all.

CONSTRUCTION

A project does not need to be several millions to cooperate with Hallgruppen. Here is an example of a small sandwich clad hall, used as a car wash. The building is optimized for a wet environment from the corrosion class of the steel structure to the stainless steel used in the automatic gates.

BUILDING SITE TENTS

Width, 120 meter | BUILDING-SITE TENT

ur client came with a specified need:
They were casting thousands of square meters of concrete, but needed some way to shelter it from rain and downfall. Within weeks Hallgruppen had the solution assembled and ready to use. A 120 meter wide hall mounted on our special rail system.
The rails span 15 meters and are anchored to concrete blocks. The tent is pulled forward as the concrete work progresses.

This is a perfect example of how Hallgruppen thinks outside the box and delivers a solution in record time.

Width, 120 meter | BUILDING-SITE TENT

10*270 meter | BUILDING-SITE TENT

It's not unusual to customize building site tents to the projects needs. Here is an example of a weather protection tent used to cover a railway facility. In some sections of Hallgruppens tent is holding the trains electrical lines. Due to high demands in security and temperature, the tent was customized with sandwich walls and air insulated roof.

In other cases Hallgruppens' standard features such as rails-system and the possibility to lift the entire tent with crane covers the project needs.

BUILDING-SITE TENT

The new generation of building site tents is now available for purchase and rental. The tent is specially designed for a quick and safe assembly, with all the flexible solutions a building site needs. These temporarily tents are ideal for short term rental and swift delivery. Most projects are assembled in a day or two.

The building site tent can be used for virtually anything that needs shelter from the weather; storage, roof-over-roof systems for renovation projects, full cover systems for bridges. It's only

the imagination that limits the possibilities for the new generation of building site tents.

Hallgruppen has the markets highest expertise in challenging weather protection projects.
